Signal Without Strategy v1.1 — number-to-source audit

Date: 2026-08-27 · **Audits:** `SIGNAL_WITHOUT_STRATEGY_MANUSCRIPT_v1.1_DRAFT.md` **Branch:** `manuscript-v1.1-revision-20260827` · **Base:** `phase6-control-matching-integrity` @ `63e8a13d8fadc4a52b8046df983fb6a8705e9985`

Every numerical claim in v1.1 with its exact source location, full-precision stored value, rounding rule, and status. No value was typed from memory or from a prior draft.

Status vocabulary. `CURRENT` — the estimate v1.1 relies on. `SENSITIVITY` — reported alongside a primary, never promoted. `SUPERSEDED` — replaced by a newer artifact, retained for provenance only. `HISTORICAL_CONTEXT` — a different study, appendix only, not a manuscript result.

Total claims audited: 65. Resolution failures: 0.

Required distinctions, stated explicitly

Quantity	Status	Why
Corrected matched association, **+2.0797 pp, p = 0.00397**	CURRENT	Newest explicitly superseding artifact; the manuscript's Level-1 estimate
Original Q1, **+1.4411 pp, t = 2.138**	SUPERSEDED	Artifact carries `citation_status = SUPERSEDED_BY_THIS_ARTIFACT`. Appendix A.2 only
Unmatched mechanism-stability, **7.72% / 3.72%, d = 1.294**	HISTORICAL_CONTEXT	Different study, different comparison group (random weeks), unmatched, no stored CI. Appendix A.3 only. **Never a headline, never matched, never predictive**
Primary clustered magnitude, **+1.509 pp, p = 0.0662**	CURRENT	Designated primary in advance; CI spans zero
Sensitivities **p = 0.03707**, **p = 0.00193**, **p = 0.00075**	SENSITIVITY	All significant; none promoted over the primary; none is incremental prediction
Strategy E incremental, **+0.0131 pp, p = 0.98332**	CURRENT	Null. Level 2
OOS magnitude, **3.6299 vs 3.6284, p = 0.9827**	CURRENT	Null. Level 2
Direction, Brier **0.2711** vs **0.2560**, AUC **0.4654**	CURRENT	Null; worse than baseline. Level 2

Sensitivity D — full disclosure

`/sensitivity/d_excluding_8_overlap_identities` yields **+2.5682 pp, p = 0.00075**, the largest estimate and smallest p-value of any matched specification. It excludes the eight identities that are both self-matched and reused, named in the frozen design: LDOS 2021-08-03, LDOS 2023-10-31, NFLX 2022-01-20, NFLX 2023-01-19, NKE 2024-03-21, QCOM 2025-02-05, SBUX 2025-01-28, STZ 2025-01-10.

It is reported in Table 2 and audited above with status `SENSITIVITY`. It does **not** appear in the title, the abstract headline, or the conclusion, and it does not replace the primary paired estimate. It is a Level-1 association on a restricted subset — not incremental prediction, not causal, not alpha.

Fields deliberately not computed

Missing	Where	Why not supplied
95% CI for sensitivity B	Table 2	Not present in the artifact. Computing one would create a new statistic
SE / df / CI for sensitivity C	Table 2	The artifact stores only the range of point estimates across refits
CI for Cohen's d = 1.294	Appendix A.3	Source script stores point estimates and a permutation p-value only

Discrepancy recorded, not reconciled

The frozen corrective design specifies leave-one-ticker-out over **28** refits (`CORRECTIVE_DESIGN_v1.0_FROZEN_2026-08-22.md`). The committed results report **26** refits and 26 entries in `by_excluded_ticker`. v1.1 reports the realised **26** and flags the difference. Nothing was recomputed to reconcile it.
